CAREER GOALS

My goal throughout my entire career has been to try my very best to satisfy my customers, regardless if they are external or internal. That is regardless of reason, if it is something I just have to answer in a quick and swift way or if I have to dig in and do a longer job for them, if that's an educational effort or any other work. I am a problem solver that sees myself in a mixed role of technical and programming work.

MY MAIN TALENTS

I'm a quick learner when it comes to technical stuff and computer systems. My background in the hardware and software development gives me a unique ability to understand the environment in which I am working. For a summary of my extensive knowledge, see the end of the document.

WORKS IN CHRONOLOGICAL ORDER

2008 – Quality Engineer IBM Svenska AB

Systems admin for our internal computers and systems, (300+)
